Pediatric

Vaccine:

COVID Vaccine for 5-11 year olds:

- 1** Vaccination is an important step in protecting children and youth against the highly contagious Delta variant
- 2** Getting your child vaccinated not only protects them from severe illness it protects other family members and loved ones.
- 3** The vaccine is safe and effective. It has been shown to prevent infections, hospitalizations, and deaths in children 5-11 years. Get more information at <https://www.dhs.wisconsin.gov/covid-19/parents.htm>

The HCN DOH is currently finalizing plans to provide COVID-19 Pfizer vaccine for children ages 5-11 years.

Details on vaccine appointments can be found at
